

LTC PHARMACY AT HOME BARRIERS BREAK DOWN

Long-Term Care Pharmacy at Home is a growing model that allows patients, especially older adults with chronic or complex conditions, to receive enhanced pharmacy services in the home setting. While the benefits to patients and caregivers are significant, independent and community pharmacies often hesitate to adopt this model due to **wrongly** perceived costs and complexities.

DELIVERY & PACKAGING

Cost can be offset by higher patient retention, medication synchronization, and increased script volume. Third-party vendors can reduce packaging/delivery costs.

BILLING & REIMBURSEMENT

While billing for services may be limited, value is often recouped through increased adherence, reduced med errors, and aligned payer partnerships.

LABOR

Many LTC Pharmacy at Home activities can be built into existing staff roles with minor adjustments. Part-time or contract-based support can fill gaps, but most pharmacies see efficiencies in overall fulfillment.

TRAINING & COMPLIANCE

Network-based education, toolkits, and compliance templates are now available to reduce time and cost burdens. (CHECK OUT OUR WEBSITE!)

TECHNOLOGY & SYSTEMS

Many LTC at Home pharmacies already use their traditionally retail pharmacy management systems! No new tech required!
